

DAFO Tami2

Free Ankle

Tamarack-hinged, articulated orthosis

A custom fabricated articulated orthosis with straight or dorsi-assist Tamarack hinges. This two-part brace has a flexible, polyethylene inner liner for comfortable foot alignment. The outer frame, with the free ankle trimline, provides above-ankle leverage to assist with medial/lateral stability while allowing for fluid motion in the sagittal plane.

Key Features

Custom fabricated from cast

Fully integrated padding

Thin polyethylene inner liner

to comfortably correct and/or maintain foot alignment. Our Softy[®] foam or OP Flex liner are available as alternatives to the polyethylene. Note: This two-part orthosis can also be ordered without the inner liner—for those with patients who have a stable, neutral foot position but need lightweight sagittal plane control.

Posterior upright features a no-stop trimline

to allow a natural free ankle motion (also available with a plantarflexion block).

Straight or dorsi-assist hinge

Tamarack Flexure Joints in 75, 85, or 95 durometer resistance. And, in pediatric, adult medium, and adult strong sizes. Adjustable FC² hinge available (at additional cost).

Defined plantar surface contours

Designed for patients who:

- Need medial/lateral stability to help control strong excess pronation or supination, but need free motion in the sagittal plane.
